

*Updated 4/26/22 (added “with some flexibility” to requirements under #22 and #23)*

*TOTAL 28 PROJECTS as of 4/22/22 (added under “Computer Science”)*

*CONTINUE TO CHECK BACK TO SEE IF THERE HAVE BEEN PROJECTS ADDED. THIS DOCUMENT WILL BE DATED EACH TIME IT IS UPDATED.*

The following are the possible internship projects you will be working on this summer if selected. In your application, you will be asked to mark all that you are interested in. You may select no more than 5 to apply to.

There are two parts of this catalog:

- **Quick Links Table of Contents** – contains key information about each project. Click on the hyperlink to go to the full description below.
- **Project Full Descriptions** – read each project’s full description to make sure this is a project you are interested in. In your application, you will want to explain your interest in each of your selected projects.

You will see that some projects are listed multiple times because they are interdisciplinary or cross disciplinary. Click here to see a complete [Project List](#).

Read through each description carefully to see if

- 1) You have the skills that the mentor/ supervisor is asking for.
- 2) You have an interest in the project.
- 3) The modality works for you – several of these are in-person, either fully or partially. You will need to provide your own transportation to the institution and some have parking fees.
- 4) Use this as a guide as you fill out the application. **READ IN FULL DETAIL!**

All internships start on Monday, 6/27/22 with a half day training. Nine week internships run through Friday, 8/26/22, and ten week internships run through 9/2/22. Note that there are a few internships that run eight weeks and one internship that runs for six weeks. Read the schedule/ stipend carefully.

If you have any questions, please reach out to the SLI Director, Sophia Kim at [kimsophia@fhda.edu](mailto:kimsophia@fhda.edu) or Marissa Yañez at [yanezmarissa@fhda.edu](mailto:yanezmarissa@fhda.edu). We are happy to provide support with the application process. Find out more at the website: <https://foothill.edu/sli/internships/summer.html>

## QUICK LINKS TABLE OF CONTENTS

***BE SURE TO REVIEW THE FULL DESCRIPTION BELOW THIS TABLE OF CONTENTS!***

***\*Some projects are cross-disciplinary and may appear under multiple disciplines***

| BIOLOGY/ CHEMISTRY  |   |   |                 |   |
|---|---|---|-----------------|---|
| Project Title   | Keywords                                    | Required Skills   | Modality        | Schedule/ Stipend                           |
| <a href="#">1. Study of structure and function of protein from common mold @ Stanford</a> | #Biochemistry<br>#Molecular_Biology<br>#Lab | The work requires manual dexterity as we used pipettors and tiny tools to handle crystals. Knowledge on preparing buffer solutions, | Fully In-person | <b>REGULAR:</b><br>15 hours per week for 10 |

|  |  |  |  |  |
|--|--|--|--|--|
|  |  | using pH-meter, balances, calculating molarity, are good to have, but not necessary.   |  | weeks / \$2500   |
| <a href="#"><u>3. Wildfire generated toxins and ecosystem recovery @ Stanford</u></a>  | #Climate_Change<br>#Environmental_Science<br>#Field_Work<br>#Lab   | General chemistry and biology courses preferred but not required.  | Fully In-person OR Hybrid - (some In-person hours & some remote hours) | <b>REGULAR:</b><br>20 hours per week for 10 weeks / \$3400 |
| <a href="#"><u>4. Redefining poverty: Examining how financial scarcity affects brain development and learning in children and adolescents @ Stanford</u></a> | #Neuroscience<br>#Data_Science<br>#Computer_Science<br>#Psychology | No prior coursework is expected to be selected for this project. Enthusiasm and eagerness to learn about this project will be privileged more than any specific skillsets or knowledge. Students who have prior experience and/or a developing interest in psychology, neuroscience, education, statistics, computer science, or related fields may be preferred. I am more interested to know why a student would want to work on this project and what they would like to gain out of this experience. | Fully remote/<br>online  | <b>MICRO:</b> 6-7 hours per week for 9 weeks / \$1000      |
| <a href="#"><u>5. Exploring how plant compounds influence mammalian immune responses @ Stanford</u></a>  | #Molecular_Biology<br>#Plant_Biology                               | A general biology class may provide helpful background, however all knowledge and skills related to this project will be taught during the internship  | Fully in person preferred but flexible                                 | <b>MICRO:</b> 6 – 7 hours per week for 9 weeks / \$1000    |
| <a href="#"><u>18. Injectable Hydrogels for the Delivery of Gene-Based Myocardial Infarction Therapy @ Stanford</u></a>                                      | #Biotech<br>#Chemistry<br>#Lab<br>#Medicine                        | Interest in science and a passion to develop tools for the betterment of society.  | Hybrid (remote and in-person)  | <b>REGULAR:</b><br>20 hours per week for 9 weeks / \$3000  |
| <a href="#"><u>21. Investigation for Protein Stabilizing Compounds in Liquid and Hydrogel Solutions @ Intact Therapeutics</u></a>                            | #Biotech<br>#Chemistry<br>#Lab<br>#Medicine                        | At least one quarter of Biology and/or Chemistry with Lab Required. Student should have a basic understanding of lab safety and how to document experiments. Basic data analysis/visualization using spreadsheets is helpful as well.  | Hybrid (remote and in-person)  | <b>REGULAR:</b><br>20 hours per week for 10 weeks / \$3400 |

|  |   |   |                         |  |
|--|---|---|-------------------------|--|
| <a href="#">22. Synthesis and characterization of electroactive polymers @ SJSU</a>      | #Organic_Chemistry<br>#Lab                      | at least two quarters of organic chemistry (chem 12A and 12B) (with some flexibility) | In-person               | <b>REGULAR:</b><br>30 hours per week for 8 weeks/<br>\$4000  |
| <a href="#">23. Synthesizing and characterizing thin films in nuclear science @ SJSU</a> | #Chemistry<br>#Lab                              | completion of Chemistry 1 series at Foothill (with some flexibility)                  | In-person               | <b>REGULAR:</b><br>30 hours per week for 8 weeks/<br>\$4000  |
| <a href="#">25. R&amp;D/Quality Internship at Bulletproof 360</a>                        | #Health<br>#Nutrition<br>#Biology<br>#Chemistry | Biology/Chemistry or related field major with an interest in the food or CPG space    | Fully remote/<br>online | <b>REGULAR:</b><br>15 hours per week for 9 weeks /<br>\$2200 |

| COMPUTER SCIENCE  |  |  |   |   |
|---|--|--|---|---|
| Project Title   | Keywords   | Required Skills  | Modality  | Schedule/S tipend   |
| <a href="#">4. Redefining poverty: Examining how financial scarcity affects brain development and learning in children and adolescents @ Stanford</a> | #Neuroscience<br>#Data_Science<br>#Computer_Science<br>#Psychology | No prior coursework is expected to be selected for this project. Enthusiasm and eagerness to learn about this project will be privileged more than any specific skillsets or knowledge. Students who have prior experience and/or a developing interest in psychology, neuroscience, education, statistics, computer science, or related fields may be preferred. I am more interested to know why a student would want to work on this project and what they would like to gain out of this experience. | Fully remote/<br>online                                     | <b>MICRO:</b> 6-7 hours per week for 9 weeks /<br>\$1000      |
| <a href="#">6. Python and Matlab programming for particle accelerators @ SLAC</a>   | #Physics<br>#Computer_Science                                      | Python or Matlab experience would help, but is not required (can learn on the job). A course or two in physics would also help, but again is not required.   | Flexible (Can be fully in-person OR hybrid OR fully remote) | <b>REGULAR:</b><br>20 hours per week for 9 weeks /<br>\$3000  |
| <a href="#">7. Software Engineering Intern @ Avenda Health</a>  | #Computer_Science<br>#Biotech                                      | Experience with a programming language such as Javascript, Python, C++ etc through coursework or personal projects. At least 1 quarter of computer-science or equivalent required.   | Fully remote with in-person options if desired              | <b>REGULAR:</b><br>20 hours per week for 10 weeks /<br>\$3400 |

|   |   |  |   |  |
|---|---|--|---|--|
| <a href="#">8. RISC-V Microprocessor Validation @ Aril Computer Corp</a>          | #Computer_Science<br>#Engineering   | At least 1 quarter of computer programming or equivalent required (CS 1A, 2A or 3A). Familiarity with C programming language is helpful. CS10 is ideal but not a requirement.  | Hybrid (remote and in-person)   | <b>REGULAR:</b><br>20 hours per week for 10 weeks / \$3400 |
| <a href="#">9. Research Associate @ ISONO Health</a>                              | #Computer_Science<br>#Engineering<br>#Machine_Learning                    | Interest in engineering and/or computer-science is preferable. Some basic coding experience is helpful, but not required as it can be taught during the internship.  | Hybrid (remote and in-person)   | <b>REGULAR:</b><br>20 hours per week for 10 weeks / \$3400 |
| <a href="#">10. Social media web scraping and data cleaning @ DARC (Stanford)</a> | #Data_Science<br>#Computer_Science  | - Cumulative GPA of 2.5 or above<br>- No prior internship experience<br>- Financial Aid needs<br>- Computer Science major or basic python programming skills (e.g., completion of at least 2 quarters of programming courses in python or equivalent)<br>- Enrollment in the Data Analytics Certificate program is helpful                               | Hybrid (remote and in-person)   | <b>REGULAR:</b><br>20 hours per week for 6 weeks / \$2000  |
| <a href="#">11. Identifying critical features of mini-earthquakes @ Stanford</a>  | #Computer_Science<br>#Machine_Learning<br>#Physics                        | Student should have an interest in learning machine learning methods! Some knowledge of waves (e.g. 1 quarter of Physics required, 2A or 4A), Basic python programming (e.g. 1 quarter of programming in Python or equivalent is required), Exposure to machine learning methods is helpful.   | Hybrid (remote and in-person)   | <b>REGULAR:</b><br>15 hours per week for 9 weeks / \$2200  |
| <a href="#">15. Exploring radar for two-car target tracking @ Stanford</a>        | #Engineering<br>#Computer_Science<br>#Physics                             | Github, Programming, either in Python or in Matlab, Some exposure to multi-variable calculus required; familiarity and/or significant interest in sensors such as cameras, LiDARs and radars is preferred. Exposure to linear algebra and differential equations is helpful.   | Fully remote/online   | <b>MICRO:</b> 6 – 7 hours per week for 9 weeks / \$1000    |
| <a href="#">16. Biomedical data fusion with machine learning @ Stanford</a>       | #Medicine<br>#Computer_Science<br>#Machine_Learning<br>#Molecular_Biology | Coding: students should be comfortable coding in python, R or equivalent programming language (At least 1 quarter of computer-programming or equivalent is highly recommended). First basics of mathematics (for example, at least 1 quarter of calculus or Statistics is highly recommended). Some knowledge of molecular biology & medicine is a plus. | Flexible (Can be fully in-person OR hybrid OR fully remote depending on needs & preference of intern) | <b>REGULAR:</b><br>20 hours per week for 10 weeks / \$3400 |

|   |   |   |  |   |
|---|---|---|--|---|
| <a href="#">26. AI Use Cases and ML Models Evaluation Project Intern @ Esperanto Technologies</a> | #Computer_Science<br>#AI                        | The projects in this area will require interns with some programming background (Python and C++), understanding of AI (deep learning) capabilities, and strong interest in use cases and marketing value propositions.  | Flexible with in-person attendance at weekly meeting | <b>REGULAR:</b><br>20 hours per week for 10 weeks / \$3400 <i>(plus extra from company)</i> |
| <a href="#">27. AI Demo Project Intern @ Esperanto Technologies</a>                               | #Computer_Science<br>#AI                        | The projects in this area will require interns to use their backgrounds in computer programming (Python and/or C++) along with understanding of Esperanto's products to support our marketing efforts. Background in AI is useful but not necessary.                | Flexible with in-person attendance at weekly meeting | <b>REGULAR:</b><br>20 hours per week for 10 weeks / \$3400 <i>(plus extra from company)</i> |
| <a href="#">28. AI Visualization Project Intern @ Esperanto Technologies</a>                      | #Computer_Science<br>#AI<br>#Data_Visualization | The project in this area will require interns with strong computer programming backgrounds (Python and C++) as well interest and understanding in statistics and basics of visualization best practices. Familiarity with AI concepts are useful but not necessary. | Flexible with in-person attendance at weekly meeting | <b>REGULAR:</b><br>20 hours per week for 10 weeks / \$3400 <i>(plus extra from company)</i> |

| EMPOWERMENT   |   |   |           |   |
|---|---|---|-----------|---|
| Project Title   | Keywords                                      | Required Skills   | Modality  | Schedule/Stipend  |
| <a href="#">24. SLI Summer Leadership Fellow @ Foothill College SLI</a> | #Leadership<br>#STEM_education<br>#STEMimpact | interest in mentoring new students, experience with facilitating workshops (or interest in learning!), understanding of the various resources at Foothill to share with new students, STEM major preferable | In-person | <b>REGULAR:</b><br>total 240 hours over 8 weeks (schedule will vary from week to week) / \$4000 |

| ENGINEERING  |  |   |  |  |
|--|--|---|--|--|
| Project Title  | Keywords   | Required Skills   | Modality   | Schedule/Stipend   |
| <a href="#">9. Research Associate @ iSono Health</a> | #Computer_Science<br>#Engineering<br>#Machine_Learning | Interest in engineering and/or computer-science is preferable. Some basic coding experience is helpful, but not required as it can be taught during the internship. | Flexible (Can be fully in-person OR hybrid OR fully) | <b>REGULAR:</b><br>20 hours per week for 10 weeks / \$3400 |

|   |  |   |   |  |
|---|--|---|---|--|
|   |  |   | remote depending on needs & preference of intern) |  |
| <a href="#">12. Mechanical behavior of additive manufactured polymers and composites @ SJSU</a> | #CAD<br>#Engineering                                   | At least 1 quarter of calculus based physics (Physics 4A) is required. Engineering 35 (Statics) is helpful. Basic knowledge of statistics is helpful. Materials and mechanics background would be good. Hands on lab skills will be needed.   | Fully in person                                   | <b>REGULAR:</b><br>15 hours per week for 9 weeks / \$2200  |
| <a href="#">13. New materials as inks for 3D bio-printing @ Stanford</a>                        | #3D_Printing<br>#CAD<br>#Engineering<br>#Medicine      | Prior coursework in biology, chemistry, and/or physics is encouraged. Experience with 3D modeling (CAD) and/or 3D printing is also helpful but not required.  | Fully in person OR Hybrid (remote and in-person)  | <b>REGULAR:</b><br>20 hours per week for 9 weeks / \$3000  |
| <a href="#">14. R&amp;D and Manufacturing Intern @ Potrero Medical</a>                          | #Health<br>#Engineering<br>#CAD<br>#Medical_Technology | -Strong Mathematics and Writing required (At least Math 1A and English 1A required)<br>-Laboratory testing and Lab Report writing experience preferred<br>-3D modeling (CAD) and engineering drawing generation is helpful<br>-Physics coursework is helpful<br>-General machine shop knowledge (hand tools) is helpful | Hybrid (remote and in-person)                     | <b>REGULAR:</b><br>20 hours per week for 10 weeks / \$3400 |
| <a href="#">15. | PHYSICS   |  |  |   |   |
|---|--|--|---|---|
| Project Title   | Keywords   | Required Skills  | Modality  | Schedule/ Stipend                                       |
| <a href="#">6. Python and Matlab programming for particle accelerators @ SLAC</a> | #Physics<br>#Computer_Science                      | Python or Matlab experience would help, but is not required (can learn on the job). A course or two in physics would also help, but again is not required.   | Flexible (Can be fully in-person OR hybrid OR fully remote) | <b>REGULAR:</b> 20 hours per week for 9 weeks / \$3000  |
| <a href="#">11. Identifying critical features of mini-earthquakes @ Stanford</a>  | #Computer_Science<br>#Machine_Learning<br>#Physics | Student should have an interest in learning machine learning methods! Some knowledge of waves (e.g. 1 quarter of Physics required, 2A or 4A), Basic python programming (e.g. 1 quarter of programming in Python or equivalent is required), Exposure to machine learning methods is helpful. | Hybrid (remote and in-person)                               | <b>REGULAR:</b> 15 hours per week for 9 weeks / \$2200  |
| <a href="#">15. Exploring radar for two-car target tracking @ Stanford</a>        | #Engineering<br>#Computer_Science<br>#Physics      | Github, Programming, either in Python or in Matlab, Some exposure to multi-variable calculus required; familiarity and/or significant interest in sensors such as cameras, LiDARs  | Fully remote/online   | <b>MICRO:</b> 6 – 7 hours per week for 9 weeks / \$1000 |

|  |  |  |  |  |
|--|--|--|--|--|
|  |  | and radars is preferred. Exposure to linear algebra and differential equations is helpful. |  |  |
|--|--|--|--|--|

| PSYCHOLOGY  |  |  |                         |   |
|---|--|--|-------------------------|---|
| Project Title   | Keywords   | Required Skills  | Modality                | Schedule/ Stipend                                       |
| <a href="#">4. Redefining poverty: Examining how financial scarcity affects brain development and learning in children and adolescents @ Stanford</a> | #Neuroscience<br>#Data_Science<br>#Computer_Science<br>#Psychology | No prior coursework is expected to be selected for this project. Enthusiasm and eagerness to learn about this project will be privileged more than any specific skillsets or knowledge. Students who have prior experience and/or a developing interest in psychology, neuroscience, education, statistics, computer science, or related fields may be preferred. I am more interested to know why a student would want to work on this project and what they would like to gain out of this experience. | Fully remote/<br>online | <b>MICRO:</b> 6-7 hours per week for 9 weeks / \$1000   |
| <a href="#">20. Lifting the Bar: Intervening At School to Reduce Juvenile Recidivism @ Stanford</a>   | #Psychology<br>#Qualitative_Research                               | No prior research experience is required! We're looking for someone who is: - interested in social psychology and education - highly detail-oriented - passionate and curious - eager to learn - passionate about social/criminal justice * some experience with qualitative data (collecting/analyzing) helps but isn't required  | Fully remote/<br>online | <b>MICRO:</b> 6 – 7 hours per week for 9 weeks / \$1000 |

**KEEP READING BELOW FOR DETAILED DESCRIPTIONS OF THE ABOVE OPPORTUNITIES.**

Make sure you read the details as you make your selections of what project you'd be interested in!

## PROJECT FULL DESCRIPTIONS

### BIOLOGY/ CHEMISTRY

| <b>DISCIPLINE: BIOLOGY/ CHEMISTRY</b> |   |
|---------------------------------------|---|
| <b>Project title</b>                  | <b>1. Study of structure and function of protein from common mold @ Stanford</b>  |
| <b>Institution and affiliation</b>    | Stanford University/ ChEM-H Institute   |
| <b>Keywords</b>                       | #Biochemistry, #Molecular_Biology, #Lab   |
| <b>Institution Address</b>            | 290 Jane Stanford Way, Stanford, CA   |
| <b>Mentor/ Supervisor</b>             | Daniel Fernandez  |
| <b>Mentor short bio</b>               | I'm a quiet person that enjoys much doing research. You mostly find me around the lab, if not I enjoy much biking the area, watching soccer, or reading books.  |
| <b>Project description</b>            | <p>Common mold disperses into the air as spores that float freely. In our body, the immune system keeps inhaled spores under control, so that the mold or fungus cell cannot grow. However, in hospitalized individuals undergoing transplants, or patients with depressed immune system, the fungus cell may grow causing tissue damage and breaking down the lung protein structure, debilitating it. The fungus uses specialized proteins to destroy lung protein. Our understanding of their mechanism of action is partial and we want to study in the laboratory what these proteins do and what three-dimensional structure they have.</p> <p>We will use methodologies from biochemistry, molecular biology, and crystallography to recombinantly produce, purify, and crystallize proteins of interest. The work will involve: a) producing the protein of interest ("production") using the well-known E. coli system; b) isolating the protein of interest ("purification") using advanced instruments like FPLC and diverse separative columns; c) preparing protein crystals ("crystallization") by mixing the protein sample with combinations of reagents in microplate format; d) handling crystals under the microscope and obtaining the three-dimensional structure by X-ray diffraction ("structure solution").</p> |
| <b>Required skills</b>                | The work requires manual dexterity as we used pipettors and tiny tools to handle crystals. Knowledge on preparing buffer solutions, using pH-meter, balances, calculating molarity, are good to have, but not necessary.  |
| <b>Modality</b>                       | Fully in-person   |
| <b>Schedule/ stipend</b>              | <b>REGULAR:</b> 15 hours per week for 10 weeks / \$2500   |
| <b>Selection process</b>              | Mentor will review a small (3 - 5) set of student applications and also interview finalists before making a final offer.  |

| <b>Mentor/ Supervisor</b>  | Claudia Avila  |
| <b>Project description</b> | <p>Elevated temperatures coupled with extended drought resulting from climate change have increased wildfire risks across California. Thirteen of the twenty most destructive wildfires on record have occurred within the past five years and are expected to increase in frequency and intensity. In addition to acute localized fire hazards, degraded air quality from smoke and dust impose disseminated and prolonged health risks.</p> <p>One large component of wildfire smoke and dust is derived from combustion of plant material; however, ash compositional differences and their associated exposure risks based on vegetation type and fire severity are poorly understood. Plant ash can contain concentrated toxic metals that originate from soils. When inhaled as smoke or dust, they can bring about harmful health effects. Additionally, the plant ash and thermally transformed surface soils represent the growth media for rebounding microbial communities. The physical-chemical alterations of plants and soils post-fire can affect bacterial and fungal community composition, which is important for ecological recovery initiatives. For example, heat generated by wildfires can alter soil properties that negatively impact the fungi and bacteria. These microorganisms can assist nutrient cycling and other ecosystem recovery functions.</p> <p>Here we have two proposed projects where we ask (1) how does varying fire severity and vegetation type affect ash toxicity? and (2) how does post-wildfire soil and ash influence microbial communities that serve as the basis for ecosystem recovery?</p> <p>We seek a summer intern to work on already established field sites in Sonoma, Napa, and Lake counties across the North Coast Range of California. Both projects include a wide range of soil analyses, such as lab extractions to measure metal content, and microscopic analysis of ash and soil particles.</p> <p>The projects diverge, however, with one (“plant project”) focusing on the plant species (and resulting ash) and the other (“microbial ecology project”) on the soil microbial communities serving as the basis for ecosystem recovery. For the plant project, additional lab-based measurements will include homogenizing and ashing different vegetation types, analyzing ash microscopically, and estimating toxicity by simulated lung fluid extractions. For the microbial ecology project, additional techniques include isolating, culturing and identifying fungal/bacterial communities in a range of post-wildfire soils using PCR and DNA sequencing. From pure cultures, we will archive representative isolates that can be applied for future recovery initiatives in wildland soils and plants.</p> |

|----------------------------|---|
| <b>Project description</b> | In this internship, the student will contribute to a project exploring how proteins in food are recognized and responded to by the immune system – leading to acceptance of food or development of food allergies. The student will gain some exposure and experience with molecular biology, immunology, and plant chemistry techniques. Specific goals for the summer may include: development of transgenic plants, profiling expression of genes/proteins in response to exposure to dietary compounds, or measuring induction of tolerance markers in response to food proteins. |
| <b>Mentor short bio</b>    | Jamie is a first year postdoc in Chemical Engineering, with a background in cell biology and nutrition. Her research focuses on the effects of plant metabolites on mammalian consumers. Specifically, she is exploring the contribution of plant metabolites to the development of food allergies and development of tolerance. Outside of the lab, she enjoys escape rooms, knitting, and reading fiction.  |
| <b>Required skills</b>     | A general biology class may provide helpful background, however all knowledge and skills related to this project will be taught during the internship   |

| <b>Company</b>                                    | SLAC National Accelerator Laboratory  |
| <b>Company website</b>                            | <a href="https://www6.slac.stanford.edu/">https://www6.slac.stanford.edu/</a>   |
| <b>Mentor/ Supervisor</b>                         | Nicole Neveu  |
| <b>Mentor Short Bio</b>                           | I was born and raised in Houston, Texas where I got my undergraduate degree in Electrical Engineering at the local college, University of Houston. Without knowing what I was getting into, I moved north to get my PhD in Physics at Illinois Tech in Chicago. After graduation and too much snow, I moved to SLAC for my 'postdoc'. I've decided to stay for a while, and now I'm an Associate Scientist at SLAC. I love accelerators and I've been having fun working on them! As for other things: I'm addicted to coffee and I have too many succulents/board games/books. |

|                            |   |
|----------------------------|---|
| <b>Company description</b> | SLAC is a Department of Energy (DOE) lab with a variety of science and engineering research projects. We are home to one of the largest particle accelerators in the world, and are pushing boundaries in physics, chemistry, biology and engineering.  |
| <b>Company address</b>     | 2575 Sand Hill Rd, Menlo Park, CA 94025   |
| <b>Project description</b> | <p>Particle accelerators at SLAC are used to make very strong and fast x-ray pulses. Scientists can use these x-rays to study materials on a tiny scale. Improving and studying the accelerator that makes the x-ray pulses is a critical research area at SLAC. In an accelerator control room, software is used every day to control hardware, do physics calculations, and display data from the accelerator. There is always a need for updates, testing, and writing of new or existing code.</p> <p>In this project, you will look at measurements of a laser profile. This laser is used to generate electrons at the very start of the particle accelerator. In Python, you will stack these laser pulse measurements and calculate the width of the data. Knowing the stacked pulse width will help us make better predictions in simulation and during experiments.</p> |
| <b>Required skills</b>     | Python or Matlab experience would help, but is not required (can learn on the job). A course or two in physics would also help, but again is not required.  |
| <b># of interns</b>        | 1   |
| <b>Modality</b>            | Flexible (Can be full in-person OR Hybrid OR Fully remote depending on needs/preference of student)   |
| <b>Schedule/ stipend</b>   | <b>REGULAR:</b> 20 hours per week for 9 weeks / \$3000  |
| <b>Selection process</b>   | Foothill SLI team will match student with mentor  |

| <b>DISCIPLINE: COMPUTER SCIENCE</b> |   |

| <b>Department description</b>       | <p>The mission of DARC (Data, Analytics, and Research Computing) is solving challenging technical questions to facilitate faculty research at the Stanford Graduate School of Business (GSB) and contributing to knowledge.</p> <p>The DARC team engages directly with faculty members, preparing large-scale datasets, assisting with data analysis, and consulting on research design. The staff provides expertise on machine learning, text processing, and cloud services, drawing from a rich technical background to support Stanford GSB's research agenda. As part of the research process, the DARC team supports transfer, transformation, and query of terabyte-scale datasets using a mix of on-premise and cloud technologies and manages the on-premise Stanford GSB research servers, providing the storage, memory, and processing necessary for computationally intensive research.</p> |
| <b>Institution address</b>          | 655 Knight Way, MBA Class of 1968 Building, Stanford, CA 94305  |
| <b>Mentor/ Supervisor</b>           | Wonhee Lee  |
| <b>Project description</b>          | <p>This project is designed to introduce our summer intern to common, yet very important, tasks in social science research — data collection and cleaning. The intern will learn how to collect data from the web and clean messy data for analysis. Since we live in the era of social media, in which a massive number of opinions and facts are shared, we will choose social media sites such as Twitter and Reddit to extract data for interesting topics (i.e., what makes people smile, attitudes towards COVID vaccines etc.).</p> <p>Specific tasks the intern will engage in include the following:</p> <ul style="list-style-type: none"> <li>• Learn how social science research is conducted</li> </ul>  |

|                          |  |
|--------------------------|--|
|                          | <ul style="list-style-type: none"> <li>• Learn how to use the APIs of social media sites to gain access to and pull their data</li> <li>• Learn how web data is displayed in HTML and how to parse it</li> <li>• Extract data programmatically using APIs and Python</li> <li>• Examine the pulled data and identify issues</li> <li>• Develop data cleaning strategies and clean the data programmatically</li> <li>• Document the data collection and cleaning process</li> </ul> <p>The responsibilities of and expectations for the intern are as follows:</p> <ul style="list-style-type: none"> <li>• Participate in the initial onboarding meeting prior to the internship to discuss the content and schedule of the internship</li> <li>• Provide input with regard to the topics of research interest and what he or she wants to gain from this internship</li> <li>• Make efforts to complete weekly assignments in time</li> <li>• Maintain good communication with and contact the supervisor when problems arise</li> <li>• Be open to constructive feedback and incorporate it into his or her work</li> </ul> <p>We are hoping to work with someone who is passionate about data analytics in social science research and wants to learn not just specific data skills but the overall research process. Please apply if you are interested in our project!</p> |
| <b>Required skills</b>   | <p>Preferences will be given to applicants who meet the following criteria:</p> <ul style="list-style-type: none"> <li>• Cumulative GPA of 2.5 or above</li> <li>• No prior internship experience</li> <li>• Financial Aid needs</li> <li>• Computer Science major or basic python programming skills (e.g., completion of at least 2 quarters of programming courses in python or equivalent)</li> <li>• Enrollment in the Data Analytics Certificate program is helpful</li> </ul>   |
| <b># of interns</b>      | 1  |
| <b>Modality</b>          | Hybrid - some in-person hours and some remote hours (if possible pending COVID restrictions, the ability to go 100% remote is possible if needed)  |
| <b>Schedule/ stipend</b> | <b>REGULAR:</b> 20 hours per week for 6 weeks / \$2000   |
| <b>Selection process</b> | Mentor will review a small (3 - 5) set of student applications and also interview finalists before making an offer.  |

|----------------------------|--|
| <b>Institution address</b> | 397 Panama Mall, Room 324  |
| <b>Mentor/ Supervisor</b>  | Anthony Clark  |
| <b>Project description</b> | Would you like to teach a computer to do something? What if that "something" needed to be done thousands or millions of times? We need "someone" to identify when mini-earthquakes (that we generate in the lab) reach the surface of our little rock samples. These arrival times help us locate where the quake originated within the sample. You will pick some of these arrival times by hand, and help us teach a computer to pick the rest. Specifically, we are building an artificial neural network ("fake brain") that will learn how to accurately do this time-consuming (for humans) task very rapidly. We want someone with some python programming experience to help optimize our code for future users. |
| <b>Required skills</b>     | Student should have an interest in learning machine learning methods! Some knowledge of waves (e.g. 1 quarter of Physics required, 2A or 4A), Basic python programming (e.g. 1 quarter of programming in Python or equivalent is required), Exposure to machine learning methods is helpful.   |
| <b># of interns</b>        | 1  |
| <b>Modality</b>            | Hybrid   |
| <b>Schedule/ stipend</b>   | <b>REGULAR:</b> 15 hours per week for 9 weeks / \$2200   |
| <b>Selection process</b>   | Mentor will review a small (3 - 5) set of student applications and also interview before making a final offer.   |

| <b>Project title</b>  | <b>16. Biomedical data fusion with machine learning at Stanford</b>  |
| <b>Keywords</b>   | #Medicine, #Computer_Science, #Machine_Learning, #Molecular_Biology  |
| <b>Institution</b>  | Stanford University  |
| <b>Lab website</b>  | <a href="http://gevaertlab.stanford.edu/">http://gevaertlab.stanford.edu/</a>  |
| <b>Lab description</b>  | The Gevaert lab focuses on biomedical data fusion of complex diseases with a particular focus on oncology and cardiovascular diseases. We develop novel machine learning approaches that digest multi-omics, multi-modal or multi-scale data. Previously we pioneered data fusion work using Bayesian and kernel methods studying breast and ovarian cancer. Subsequent work concerned the development of methods for multi-omics data fusion. This resulted in the development of MethylMix, to identify differentially methylated genes, and AMARETTO, a computational method to integrate DNA methylation, copy number and gene expression data to identify cancer modules. Additionally, my lab focuses on linking molecular data with cellular and tissue-level phenotypes. This led to key contributions in the field of imaging genomics/radiogenomics involving work in lung cancer and brain tumors. Our work in imaging genomics is focused on developing a framework for non-invasive personalized medicine. In summary, my lab has an interdisciplinary focus on developing novel algorithms for multi-scale biomedical data fusion. |
| <b>Company address</b>  | 1265 Welch Road, Stanford, CA  |
| <b>Mentor/ Supervisor</b>   | to be determined   |
| <b>Project description</b>  | My lab focuses on biomedical data fusion: the development of machine learning methods for biomedical decision support using multi-scale biomedical data. Previously we pioneered data fusion work using Bayesian and kernel methods studying breast and ovarian cancer. Additionally, we developed computational algorithms for the identification of driver genes using multi-omics data. Furthermore, we are working on multi-scale biomedical data fusion methods, bridging the molecular using omics data, cellular using pathology data and tissue using medical imaging data.  |

|----------------------------|---|
|                            | environments. The company's proprietary technology enables highly compute-energy efficient computing systems at production scale.   |
| <b>Company address</b>     | 800 W El Camino Real UNIT 410, Mountain View, CA 94040  |
| <b>Mentor/ Supervisor</b>  | Jin Kim   |
| <b>Project description</b> | Part of developing complex, modern AI systems (hardware and software) involves continuous and incremental analysis of system performance around different workloads for future improvements. One of the best ways to understand performance of AI systems is to analyze both the data consumed by the AI systems as well as evaluating the data created by these systems. Data visualization is an effective way to understand complex system behavior. This project will involve building a series of data visualization tools to facilitate understanding of data manifolds, computational characteristics of specific layers of deep learning models running on Esperanto systems, as well as more creative means of understanding outputs of AI systems built with Esperanto's hardware and software. The project will expose interns to various data visualization methods used in understanding AI systems. |
| <b>Required skills</b>     | The project in this area will require interns with strong computer programming backgrounds (Python and C++) as well as interest and understanding in statistics and basics of visualization best practices. Familiarity with AI concepts are useful but not necessary.  |
| <b># of interns</b>        | 1 - 2   |
| <b>Modality</b>            | Flexible (Fully in-person, Hybrid or Fully remote depending on needs of intern) with weekly in-person meeting encouraged  |
| <b>Schedule/ stipend</b>   | <b>REGULAR:</b> 20 hours per week for 10 weeks / \$3400 (along with additional company pay to match their internship rate)  |
| <b>Selection process</b>   | Company will review 3 - 5 applications, possibly interview candidates, and select 1 or 2 to make offers to  |

## EMPOWERMENT

| <b>DISCIPLINE: EMPOWERMENT</b>     |   |
|------------------------------------|---|
| <b>Project title</b>               | SLI Summer Leadership Fellow @ Foothill College SLI   |
| <b>Keywords</b>                    | #Leadership, #STEM_education, #STEMimpact   |

| <b>Lab website</b>         | <a href="http://www.ozgurkeles.com">www.ozgurkeles.com</a>   |
| <b>Project description</b> | Students will create CAD files of basic test samples, will perform additive manufacturing of polymers/composites, perform tensile, bending, toughness tests on these samples, and present results.   |
| <b>Mentor/ Supervisor</b>  | Ozgur Keles  |
| <b>Mentor short bio</b>    | Dr. Keles is an Assistant Professor of Chemical and Materials Engineering at San Jose State University. He received his B.S. and M.S. degrees from the Department of Metallurgical and Materials Engineering at Middle East Technical University, and his Ph.D. in Materials Engineering from Purdue University. His current research interests are multi-scale material structure control using 3D printing, sustainability, materials informatics, and virtual reality in engineering education. Keles uses numerical and experimental approaches to improve strength and toughness of material systems, while making them lighter. Moreover, he investigates the effects of recycling on the mechanics of polymers. Keles is also a photographer and digital artist who uses aesthetically appealing images and computer visualizations to improve student engagement, aid student learning, and foster creativity in engineering students. His recent work uses virtual reality to facilitate learning of engineering concepts in pedagogically-designed environments. |
| <b>Required skills</b>     | At least 1 quarter of calculus based physics (Physics 4A) is required. Engineering 35 (Statics) is helpful. Basic knowledge of statistics is helpful. Materials and mechanics background would be good. Hands on lab skills will be needed.  |
| <b>Modality</b>            | Fully in-person at San Jose State University   |
| <b>Schedule/ stipend</b>   | <b>REGULAR:</b> 15 hours per week for 9 weeks / \$2200   |

| <b>Mentor/ Supervisor</b>  | Lucia Brunel   |
| <b>Project description</b> | The field of 3D bio-printing emerged from the application of engineering principles to address biological questions and challenges. 3D bio-printing is similar to traditional 3D printing, but the inks include embedded cells. This promising technology can be used to fabricate living devices for regenerative medicine and disease modeling. In this project, we are working to develop and validate new cell-compatible materials that function well as bio-inks. Interns will design physiologically-relevant CAD models, perform chemical synthesis of bio-ink materials, and characterize the mechanical and biochemical properties of the bio-inks to investigate the effect on their printability and suitability for living cells. |
| <b>Mentor short bio</b>    | Lucia is a 3rd year PhD candidate in Chemical Engineering, with a background in polymer science and mammalian cell culture. Her research focuses on the design of hydrogel materials and crosslinking chemistries for 3D bio-printing with encapsulated cells. Currently, she is using 3D bio-printing to create bioengineered corneal substitutes to address the global shortfall of donor corneal tissue available for transplantation. Outside of the lab, she enjoys exploring the beaches, museums, and hikes in the Bay Area.  |
| <b>Required skills</b>     | Prior coursework in biology, chemistry, and/or physics is encouraged. Experience with 3D modeling (CAD) and/or 3D printing is also helpful but not required.   |
| <b># of interns</b>        | 2  |
| <b>Modality</b>            | Fully in-person at the company address location above, Hybrid - some in-person hours and some remote hours   |
| <b>Schedule/ stipend</b>   | <b>REGULAR:</b> 20 hours per week for 9 weeks / \$3000   |
| <b>Selection process</b>   | Company will review a small (3 - 5) set of student applications and pick 1 or 2 top choices to make offers to.   |

| <b>Project title</b>  | <b>16. Biomedical data fusion with machine learning at Stanford</b>  |
| <b>Keywords</b>   | #Medicine, #Computer_Science, #Machine_Learning, #Molecular_Biology  |
| <b>Institution</b>  | Stanford University  |
| <b>Lab website</b>  | <a href="http://gevaertlab.stanford.edu/">http://gevaertlab.stanford.edu/</a>  |
| <b>Lab description</b>  | The Gevaert lab focuses on biomedical data fusion of complex diseases with a particular focus on oncology and cardiovascular diseases. We develop novel machine learning approaches that digest multi-omics, multi-modal or multi-scale data. Previously we pioneered data fusion work using Bayesian and kernel methods studying breast and ovarian cancer. Subsequent work concerned the development of methods for multi-omics data fusion. This resulted in the development of MethylMix, to identify differentially methylated genes, and AMARETTO, a computational method to integrate DNA methylation, copy number and gene expression data to identify cancer modules. Additionally, my lab focuses on linking molecular data with cellular and tissue-level phenotypes. This led to key contributions in the field of imaging genomics/radiogenomics involving work in lung cancer and brain tumors. Our work in imaging genomics is focused on developing a framework for non-invasive personalized medicine. In summary, my lab has an interdisciplinary focus on developing novel algorithms for multi-scale biomedical data fusion. |
| <b>Company address</b>  | 1265 Welch Road, Stanford, CA  |
| <b>Mentor/ Supervisor</b>   | to be determined   |
| <b>Project description</b>  | My lab focuses on biomedical data fusion: the development of machine learning methods for biomedical decision support using multi-scale biomedical data. Previously we pioneered data fusion work using Bayesian and kernel methods studying breast and ovarian cancer. Additionally, we developed computational algorithms for the identification of driver genes using multi-omics data. Furthermore, we are working on multi-scale biomedical data fusion methods, bridging the   |

| <b>Company description</b> | Intact Therapeutics is a clinical stage, biopharmaceutical company focused on developing targeted therapies for the gastrointestinal tract based on technology developed at Stanford University. Intact's technology is designed to increase local exposure of therapy to diseases affecting the mucosal lining, thereby improving efficacy and increasing patient acceptance.   |
| <b>Company address</b>     | 2627 Hanover St. Palo Alto, CA 94304   |
| <b>Mentor/ Supervisor</b>  | Chris Zhan   |
| <b>Mentor short bio</b>    | I am a first-generation immigrant who grew up in the east bay. I attended the Peralta Community Colleges before transferring to UC Berkeley, where I received a B.S. in Chemical Engineering and Material Science. I have 7 years of manufacturing and quality experiences in medical devices where I worked with formulations and drug delivery technologies. I am now a formulation scientist at Intact Therapeutics working on the development of a drug delivery platform using thermosensitive hydrogels. |
| <b>Project description</b> | Research, plan, and conduct investigational experiments. Prepare buffers, formulations, and other solutions. Assist in formulation characterization works such as protein activity, rheology, pH, and stability. Additional exposures to UV-Vis Spectroscopy, HPLC, electrophoresis, and other investigational techniques as needed.   |
| <b>Required skills</b>     | At least one quarter of Biology and/or Chemistry with Lab Required. Student should have a basic understanding of lab safety and how to document experiments. Basic data analysis/visualization using spreadsheets is helpful as well.  |
| <b># of interns</b>        | 1  |
| <b>Modality</b>            | Hybrid - some in-person hours and some remote hours  |
| <b>Schedule/ stipend</b>   | <b>REGULAR:</b> 20 hours per week for 10 weeks / \$3400  |
| <b>Selection process</b>   | Company will review a small (3 - 5) set of student applications and also MAY interview finalists before making a final offer.  |

## PHYSICS

| <b>DISCIPLINE: COMPUTER SCIENCE &amp; PHYSICS</b> |   |
|---|---|
| <b>Project title</b>                              | <b>6. Python and Matlab programming for particle accelerators at SLAC</b>     |
| <b>Keywords</b>                                   | #Physics, #Computer_Science   |
| <b>Company</b>                                    | SLAC National Accelerator Laboratory  |
| <b>Company website</b>                            | <a href="https://www6.slac.stanford.edu/">https://www6.slac.stanford.edu/</a> |

|                            |   |
|----------------------------|---|
| <b>Mentor/ Supervisor</b>  | Nicole Neveu  |
| <b>Mentor Short Bio</b>    | I was born and raised in Houston, Texas where I got my undergraduate degree in Electrical Engineering at the local college, University of Houston. Without knowing what I was getting into, I moved north to get my PhD in Physics at Illinois Tech in Chicago. After graduation and too much snow, I moved to SLAC for my 'postdoc'. I've decided to stay for a while, and now I'm an Associate Scientist at SLAC. I love accelerators and I've been having fun working on them! As for other things: I'm addicted to coffee and I have too many succulents/board games/books.   |
| <b>Company description</b> | SLAC is a Department of Energy (DOE) lab with a variety of science and engineering research projects. We are home to one of the largest particle accelerators in the world, and are pushing boundaries in physics, chemistry, biology and engineering.  |
| <b>Company address</b>     | 2575 Sand Hill Rd, Menlo Park, CA 94025   |
| <b>Project description</b> | <p>Particle accelerators at SLAC are used to make very strong and fast x-ray pulses. Scientists can use these x-rays to study materials on a tiny scale. Improving and studying the accelerator that makes the x-ray pulses is a critical research area at SLAC. In an accelerator control room, software is used every day to control hardware, do physics calculations, and display data from the accelerator. There is always a need for updates, testing, and writing of new or existing code.</p> <p>In this project, you will look at measurements of a laser profile. This laser is used to generate electrons at the very start of the particle accelerator. In Python, you will stack these laser pulse measurements and calculate the width of the data. Knowing the stacked pulse width will help us make better predictions in simulation and during experiments.</p> |
| <b>Required skills</b>     | Python or Matlab experience would help, but is not required (can learn on the job). A course or two in physics would also help, but again is not required.  |
| <b># of interns</b>        | 1   |
| <b>Modality</b>            | Flexible (Can be full in-person OR Hybrid OR Fully remote depending on needs/preference of student)   |
| <b>Schedule/ stipend</b>   | <b>REGULAR:</b> 20 hours per week for 9 weeks / \$3000  |
| <b>Selection process</b>   | Foothill SLI team will match student with mentor  |

| <b>DISCIPLINE: COMPUTER SCIENCE &amp; PHYSICS</b> |   |
|---|---|
| <b>Project title</b>                              | <b>11. Identifying critical features of mini-earthquakes at Stanford</b>      |
| <b>Keywords</b>                                   | #Computer_Science, #Machine_Learning, #Physics                                |
| <b>Institution</b>                                | Stanford University   |
| <b>Institution website</b>                        | <a href="http://www.stanford.edu">www.stanford.edu</a>                        |
| <b>Institution description</b>                    | Undergraduate, graduate, and lifelong learning through teaching and research. |
| <b>Institution address</b>                        | 397 Panama Mall, Room 324   |

|                            |  |
|----------------------------|--|
| <b>Mentor/ Supervisor</b>  | Anthony Clark  |
| <b>Project description</b> | Would you like to teach a computer to do something? What if that "something" needed to be done thousands or millions of times? We need "someone" to identify when mini-earthquakes (that we generate in the lab) reach the surface of our little rock samples. These arrival times help us locate where the quake originated within the sample. You will pick some of these arrival times by hand, and help us teach a computer to pick the rest. Specifically, we are building an artificial neural network ("fake brain") that will learn how to accurately do this time-consuming (for humans) task very rapidly. We want someone with some python programming experience to help optimize our code for future users. |
| <b>Required skills</b>     | Student should have an interest in learning machine learning methods! Some knowledge of waves (e.g. 1 quarter of Physics required, 2A or 4A), Basic python programming (e.g. 1 quarter of programming in Python or equivalent is required), Exposure to machine learning methods is helpful.   |
| <b># of interns</b>        | 1  |
| <b>Modality</b>            | Hybrid   |
| <b>Schedule/ stipend</b>   | <b>REGULAR:</b> 15 hours per week for 9 weeks / \$2200   |
| <b>Selection process</b>   | Mentor will review a small (3 - 5) set of student applications and also interview before making a final offer.   |

| <b>DISCIPLINE: ENGINEERING &amp; COMPUTER SCIENCE &amp; PHYSICS</b> |   |

| <b>Project title</b>  | <b>15. Exploring radar for two-car target tracking at Stanford</b>  |
| <b>Keywords</b>   | #Engineering, #Computer_Science, #Physics   |
| <b>Mentor/ Supervisor</b>   | Adyasha Mohanty   |
| <b>Institution and Affiliation</b>                                  | AeroAstro at Stanford University  |
| <b>Project Description</b>  | The project shall involve designing algorithms for target tracking using a RADAR sensor for a two-car setup within a filtering framework. The first few weeks will involve replicating existing filtering algorithms that use RADAR for collision avoidance or target tracking. In the second half of the project, the student will conceptualize and code a new algorithm. This algorithm will be used by the follower car to track the leader car and always maintain a safe distance from it, without risking collision at any timestep. |
| <b>Institution Address</b>  | 496 Lomita Mall, Stanford, CA   |
| <b>Short Bio</b>  | I am a third-year PhD student in AeroAstro at Stanford. My research revolves around designing algorithms for safe perception of autonomous cars. I also get excited by opportunities to mentor students, DEI initiatives and startups that are working on cutting-edge autonomy. I am involved in multiple leadership positions on campus and I love having an impact in anyway possible. My hobbies include dancing/zumba, traveling around the world and just meeting different people and having engaging conversations!                 |

|                          |  |
|--------------------------|--|
| <b>Required Skills</b>   | Github, Programming, either in Python or in Matlab, Some exposure to multi-variable calculus required; familiarity and/or significant interest in sensors such as cameras, LiDARs and radars is preferred. Exposure to linear algebra and differential equations is helpful. |
| <b># of interns</b>      | 1  |
| <b>Modality</b>          | Fully remote/ online   |
| <b>Schedule/ stipend</b> | <b>MICRO:</b> 6 – 7 hours per week for 9 weeks / \$1000  |
| <b>Selection Process</b> | Research mentor will review 3 - 5 applications and select 1 or 2 to make offers to   |

**PSYCHOLOGY**

| <b>DISCIPLINE: BIOLOGY/ CHEMISTRY &amp; COMPUTER SCIENCE &amp; PSYCHOLOGY</b> |   |
|---|---|
| <b>Project title</b>  | <b>4. Redefining poverty: Examining how financial scarcity affects brain development and learning in children and adolescents at Stanford</b>   |
| <b>Keywords</b>   | #Neuroscience, #Data_Science, #Computer_Science, #Psychology  |
| <b>Mentor/ Supervisor</b>   | Gabriel Reyes   |
| <b>Institution and affiliation</b>  | Stanford University/ Graduate School of Education   |
| <b>Institution address</b>  | 485 Lasuen Mall, Stanford, CA   |
| <b>Project description</b>  | <p>A growing number of cognitive neuroscientists are researching how poverty affects brain development and behavior, but a significant problem in the field is that many conceptualize poverty differently. Various measures currently exist to capture poverty — income, socioeconomic status (SES), income-to-needs ratio, questionnaires on material deprivation — but identifying which measure precisely and accurately captures the lived experiences of those from low-income backgrounds is not quite clear. To better understand how poverty impacts cognitive and neural systems integral to learning and memory, it is critical that we understand how this is defined and analyzed.</p> <p>Therefore, the purpose of this project is two fold: the first is to examine if different measures of poverty affect statistical analysis on behavioral outcomes in psychology using a open access data set (Fragile Families Study; n = 5000); the second is to interrogate whether these current measures are sufficient in elucidating how poverty affects development by establishing a new questionnaire that accurately captures these experiences.</p> <p>Student intern(s) who work on this project will be able to gain experience and support on statistical analysis, R programming, literature review in cognitive neuroscience articles, programming cognitive tasks using jsPsych, survey design using Qualtrics, or other skills that match their own learning goals relevant to this project.</p> |

|                          |  |
|--------------------------|--|
| <b>Mentor short bio</b>  | My name is Gabriel Reyes, a current PhD student in Developmental and Psychological Sciences at Stanford University on a Knight-Hennessy Scholarship. Originally from Albuquerque, New Mexico and a son of Mexican immigrants, I was the first in my family to graduate from college as a Gates Millennium Scholar, where I earned my Sc.B. in Cognitive Neuroscience from Brown University, as well as an M.S. in Neuroscience & Education from Columbia University. As someone who was born into poverty, I am particularly passionate about science inclusion and promoting people who are systematically excluded from pursuing research experiences as a result of finances; I am a staunch believer that talent is everywhere but opportunities are not. The things I love most in the world are my family (especially my fiancé) , tacos, traveling, movies, and taking long walks (to get tacos). |
| <b>Required skills</b>   | No prior coursework is expected to be selected for this project. Enthusiasm and eagerness to learn about this project will be privileged more than any specific skillsets or knowledge. Students who have prior experience and/or a developing interest in psychology, neuroscience, education, statistics, computer science, or related fields may be preferred. I am more interested to know why a student would want to work on this project and what they would like to gain out of this experience.   |
| <b># of interns</b>      | 1  |
| <b>Modality</b>          | Fully remote/ online   |
| <b>Schedule/ stipend</b> | <b>MICRO:</b> 6- 7 hours per week for 9 weeks / \$1000   |
| <b>Selection process</b> | Mentor will review a small (3 - 5) set of student applications and pick 1 or 2 top choices to make offers to.  |

| <b>DISCIPLINE: PSYCHOLOGY</b>   |   |
|---------------------------------|---|
| <b>Project title</b>            | <b>20. Lifting the Bar: Intervening at School to Reduce Juvenile Recidivism at Stanford</b>   |
| <b>Keywords</b>                 | #Psychology, #Qualitative_Research  |
| <b>Mentor/ Supervisor</b>       | Anmol Gupta   |
| <b>Institution/ affiliation</b> | Stanford University/ Psychology   |
| <b>Project description</b>      | <p>Lifting the Bar is a social psychological intervention designed to improve recidivism outcomes (e.g. returning to detention) for students transitioning out of juvenile detention by "sidelining" the bias that students face when returning to school. In the intervention, participants provide insights into their goals, challenges, and values, as well as their experiences in juvenile detention. For further information about the project, see also: <a href="https://www.youtube.com/watch?v=DolhAohOiOo">https://www.youtube.com/watch?v=DolhAohOiOo</a></p> <p>The Foothill College intern will support many functions including background research, literature reviews, an analysis of the relevance of this work to other at-risk populations, qualitative data analysis and other project needs.</p> |

|                          |  |
|--------------------------|--|
| <b>Mentor short bio</b>  | I'm interested in social psychological solutions to societal problems, especially pertaining to race, gender, and disability. In undergrad, I studied psychology and music, and I love to listen to and make music in my free time. Before coming to Stanford, I worked at the Center for Social Development and Education at UMass Boston, where I worked on program evaluations for inclusive in-school/after-school programming. I'm also a first-gen Indian American and grew up in Wisconsin! After Stanford, I hope to go to grad school to study social psychology. |
| <b>Required skills</b>   | No prior research experience is required! We're looking for someone who is:<br>- interested in social psychology and education - highly detail-oriented -<br>passionate and curious - eager to learn - passionate about social/criminal justice *<br>Some experience with qualitative data (collecting/analyzing) helps but isn't required   |
| <b># of interns</b>      | 1  |
